**An 'a' next, Furman!**

Alex Waite received many wounds of varied natures in the Florida game and immediately preceding. One of them was in the heart and these are the kind that heal very slowly.

We can, we can, we know we can. We can, we can, we must. We can, we can, we know we can. We'll lick old Furman or bust!

The outcome of the Florida game was almost as exciting as the actual thing itself. When the ball was on Carolina's one yard line and our team held them for downs the scene was as clear in our minds as if we had been right there on the sidelines. Florida should be proud of herself and her team to have tied Metzer's Gamewocks.

Every man who can possibly do so should go to Greenville for the Furman-Carolina game. This game will decide the state championship and we should not allow our team to battle for the championship on foreign territory without full support from the side lines. Furman supporters will be out in force so its up to us to back up our team with our presence. All Carolina men should make the trip on the same train so enough pep can be generated on the way to Greenville to put the ball over from the sidelines if the team can't do it. Freshman's red caps should be much in evidence and every loyal son of Carolina should show his colors. All aboard for Greenville. Let's go!

### Art Shop

**HORINE'S, Inc.**

**Picture Frames, Artists' Supplies, Art Goods**

1517 Main Street

**Lower Main Street**

**BANK**

Nearest to the Students
Essentially a Young Man's Bank

Officiered by Young Men

---

**ATTENTION**

University Students!

**Good Home Cooking**

Special Rates to University Students
Daily Breakfast. One block from campus. On way to Main Street

1012 Marion St. - Phone 3964 J.

---

### Drawing Material, Engineers Supplies

**Picture Frames, Wall Paper, Auto Wind Shields and Headlights**

**Webb's Art Store**

1627 Main Street

Phones 640 & 601

---

### Why Is Iron Magnetic?

A horseshoe magnet attracts a steel needle. But why? We don't know exactly. We do know that electricity and magnetism are related.

In dynamos and motors we apply electro-magnetic effects. All our power-stations, lighting, electric traction and motor driven, even the ignition system of our automobiles, combine these magnetic effects with our own understanding.

Perhaps if we understood them we could utilize them much more efficiently. Perhaps we could discover combinations of materials more magnetic than iron.

The Research Laboratories of the General Electric Company investigate magnetism by trying to find out more about electrons and their arrangement in atoms.

X-rays have shown that each atom consists of electrons grouped around a central mass—like planets around an astral sun. X-rays enable us to see extent to which these atoms and may give us a hint as to what makes for magnetism.

This is research in pure science, and nothing else. Only this can real progress be made.

Studious of this kind are constantly yielding results too important to pass over lightly. Perhaps in a very few years we may be able to form into positive laws the amazing facts which this research is uncovering.
