Macready Society To Present Comedy

BY ROSEMARY HANKINS
Staff Writer

I guess that you might call me an amateur student at Carolina. I hasn't cut an average of one week in my entire career at Spring. And I'm majoring in Biological Science. That is the name that I tell the people when I'm in the room. In fact, I've been told that I'm the only one in the building who doesn't know what the science is. I've always been interested in science, but I don't have much time for it. I'm always busy with my studies.

But I think it's never too late to learn something new. I've been thinking about joining the scientific community, and I think it would be great to work with some of the other students in the program. I've met a lot of interesting people already, and I'm really looking forward to learning more about the world of science.

So if you're interested in science, too, let's start learning together. We can take classes together and share our knowledge. I think it would be great to have a group of people interested in science who could help each other out.
